

SnAP Reagents

Introduction

SnAP reagents are used for the rapid synthesis of medium-sized saturated *N*-heterocycles, including bicyclic and spirocyclic structures. They are easy to use, work with a wide variety of aldehydes and ketones and provide access to diverse medchem-relevant heterocycles. In this context, *Enamine* offers a library of SnAP reagents for drug design.¹⁻⁶

Design

We offer SnAP reagents from stock on a 5-10 g scale.
