

For Palladium-Catalysed C–N And C–C Cross-Couplings.

Air and moisture insensitive auxiliary ligands for highly efficient palladium catalysts. These **ultra - low loading (high TONs or TOFs)** catalysts have shown excellent activity in **Suzuki cross - coupling with aryl bromides and chlorides**, **Heck vinylation**, **Heck - Sonogashira alkynylation** and **allylic amination** of allyl acetates (**Tsuji – Trost** type reactions). Low loadings of the catalysts ensure minimal contamination of the final compounds with palladium and simplify the purification procedures. High stability of the allows to store them for unlimited time without special precautions.

EN400-15231	EN400-15232	EN400-15233
EN400-15234	EN400-15235	EN400-15236

Ligands are available in milligram and multigram quantities.

EXAMPLES & NOTES:

(J.-C. Hierso et al. *Organometallics* (2003), 22(22), 4490-4499.)

- Suzuki cross-coupling with aryl bromides at **ultra-low** catalyst loadings (L = Tetraphos Fc(P)4 EN400-15231)

R ¹	R ²	Ratio S/Cat.	Yield, %
C(=O)Me	H	100000	100 (94) ^a
CN	H	100000	100 (87) ^a
CF ₃	H	100000	100
OMe	H	100000	77
OMe	H	10000	100 (92) ^a

a - isolated yield, conditions: 1 Pd / 1 Tetraphos Fc(P)4: 10⁻² - 10⁻⁴ mol%;
DMF or xylene, K₂CO₃, 130 °C, 20h.

- Suzuki cross-coupling with aryl chlorides (L = Tetraphos Fc(P)4 EN400-15231)

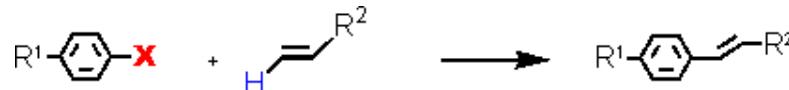

R ¹	R ²	Ratio S/Cat.	Yield, %
C(=O)Me	OMe	1000	98 (88) ^a

C(=O)Me	OMe	10000	74
CN	OMe	1000	89 (83) ^a

a - isolated yield, conditions: 1 Pd / 1 Tetraphos Fc(P)₄ : 10⁻¹ - 10⁻² mol%; DMF or xylene, K₂CO₃, 130 °C, 20h.

- **Heck reaction at ultralow catalyst loadings (L = Tetraphos Fc(P)₄ EN400-15231)**

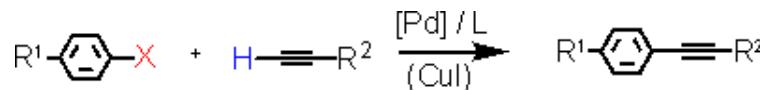

Aryl Halide	Alkene	Ratio S/Cat.	Yield, %	Time, h
PhI	<i>n</i> -BuOCOCH=CH ₂	1000 000	100 (85) ^a	48
4-MeOC ₆ H ₄ Br	<i>n</i> -BuOCOCH=CH ₂	10 000	100 (88) ^a	48
4-MeOC ₆ H ₄ Br	C ₆ H ₅ CH=CH ₂	100 000	65 ^a	20
4-CH(O)C ₆ H ₄ Br	<i>n</i> -BuOCH=CH ₂	250	100 (83) ^a	20
4-CH(O)C ₆ H ₄ Br	<i>n</i> -BuOCH=CH ₂	1000	41 ^a	20

a - isolated yield, conditions: 1 Pd / 1 Tetraphos Fc(P)₄, Xylene, K₂CO₃, 130 °C.

- **Alkylation of aryl halides (Heck-Sonogashira reaction)** under low (10⁻¹ to 10⁻⁴ mol%) catalyst loadings in the presence of a Triphos Fc(P)₂P*i*-Pr EN400-15233 with TONs up to 250000. **Copper-free** coupling using phenyl- acetylene is also accessible in good yield.

H. Doucet, J.-C. Hierso, *Angewandte Chemie International Edition* (2007), 46, 834-871.

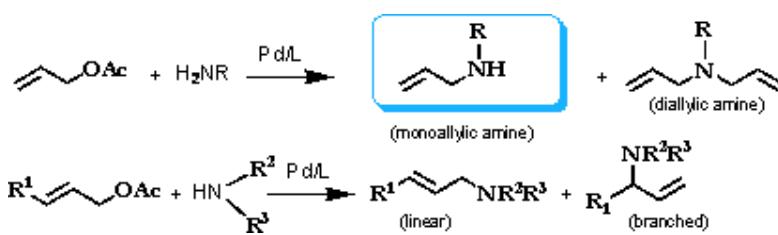

Aryl Halide	Alkyne	Ratio S/Cat.	Yield, %
PhI	phenylacetylene	100000	95
4-Bromoacetophenone	phenylacetylene	100000	94
4-Bromobenzonitrile	phenylacetylene	10000	89
4-Chlorobenzonitrile	phenylacetylene	250	86 ^a
4-Bromoanisole	phenylacetylene	250	93
4-Bromoacetophenone	but-1-yn-4-ol	250	92 ^b

^aReaction performed without CuI.

^bReaction performed at 100 °C / Conditions: catalyst {Pd(C₃H₅Cl)₂}/Triphos Fc(P)₂P*i*-Pr 1/2, aryl halide (1 mmol), alkyne (2 mmol), CuI (0.05 mmol), K₂CO₃ (2 mmol), DMF, 130 °C, 20 h, isolated yields.

- **Selective Amination of allylic acetates** under low catalyst loadings in the presence of ferrocenyldiphosphine *Diphos Fc(P^{FuMe})₂* EN400-15236
